Neoconix Expands its Sunnyvale Manufacturing and Development Facility

SUNNYVALE, November 4, 2005 – Neoconix has completed the expansion of its manufacturing and development facility in Sunnyvale. In addition to the corporate offices, the Sunnyvale facility now includes a complete, state-of-the-art processing line, bulk materials processing, inventory warehousing, and a metrology lab capable of supporting both production and advanced R&D efforts.

“The expansion of the Sunnyvale facility is an important part of our overall manufacturing growth plan,” said Reg Simpson, Neoconix’s Vice President of Operations. “This facility will be the center of excellence for our interconnect technologies and will support our contract manufacturing partners worldwide.”

The facility’s processing line has been developed specifically to support both production and advanced development engineering. The lithography, plating, and etch processes are housed in a class 10,000 clean room environment and the equipment set supports multiple chemistries and resist systems. Product shipments from the new facility will begin in December of this year.

About Neoconix: Neoconix, Inc. blazes the path of least resistance between electronic devices with innovative interconnect solutions. Formerly Epic Technology, Inc., the company leverages proprietary technologies and unique manufacturing processes to deliver optimized electrical interconnection solutions that greatly improve the cost and performance of our customers’ electronic systems.
